

- **Initial complement of 4 λ s installed and available at outset**
 - One λ for national switched Ethernet experimental network
 - Another λ for national 10 Gbps IP network to support internetworking and end-to-end transport protocol experiments
 - Similar to Internet2's Abilene except routers will be available for measurement and experimentation
 - Third λ will serve as a quick start facility for new research projects
 - Fourth λ will be used by Internet2's HOPI testbed
- More λ s will be activated as needed to support the research and operational objectives of the community**
